

BOCES' Building Project Results in Real-world Experience for Computer Repair & Networking Students

Fall/Winter 2009-10 (New Hartford, N.Y.) – CTEC's Computer Repair and Networking students have gained some very valuable experience as a result of the OHM BOCES' building project.

Students broke down and set back up their classroom four times because of the moves. This involves the total dismantling and rebuilding of an entire network, setting up their classroom with 20 computer stations, and making it all work in a short period of time. There are numerous skills involved in accomplishing these tasks. The work these students can do could save many hours of down time and expense. This experience enhances the possibility of these students finding employment with companies that do this kind of work or with companies in need computer/network support.
